

Geoteric Installation Guide

Prior to installation

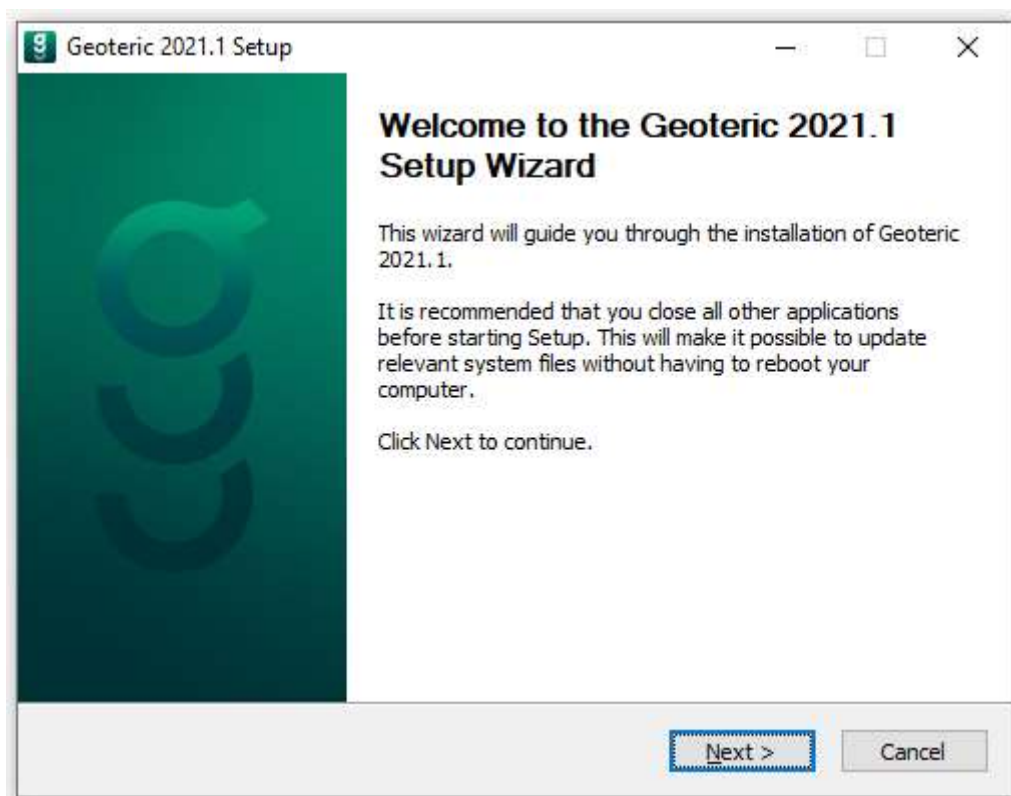

If you have previously installed Geoteric on your machine, this following step is not needed.

For Geoteric 2021.1 only, please ensure that you have Visual Studio (VS) 2013 redistributable x64 and x86 runtime installed on your machine.

If you have never installed Geoteric on your machine, you will need to do this additional step. The VS2013 redistributable x64 and x86 installers can be found on the Geoteric FTP site.

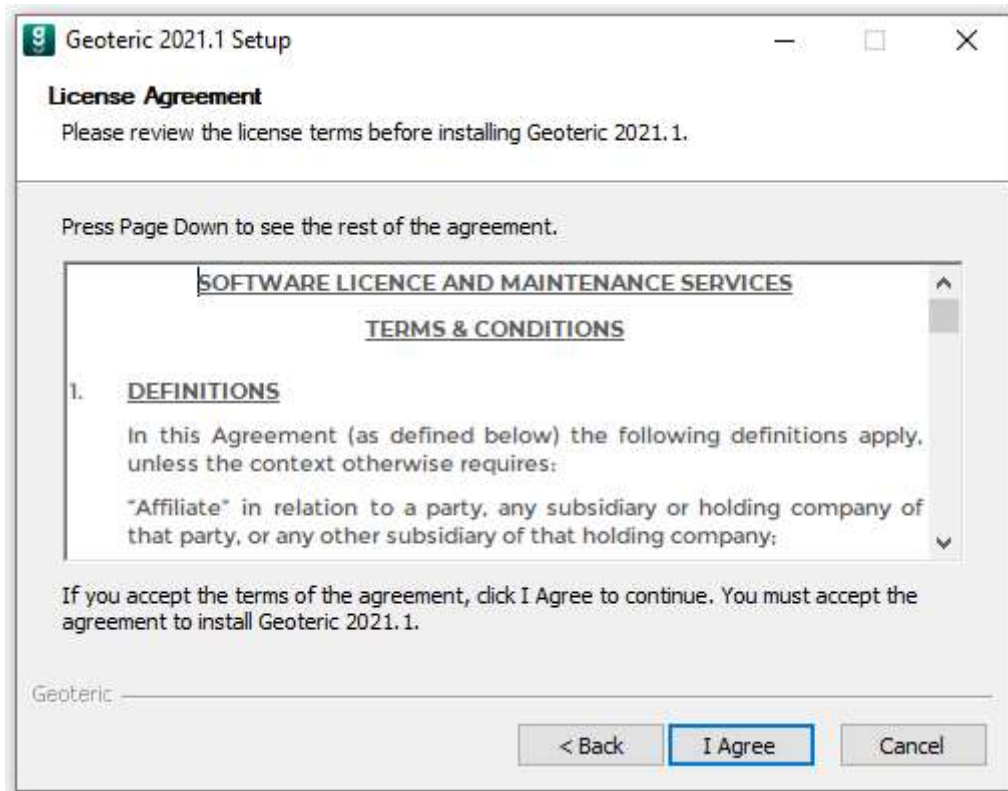

Windows installation

After downloading the Windows exe, double click on it to begin the installation wizard.

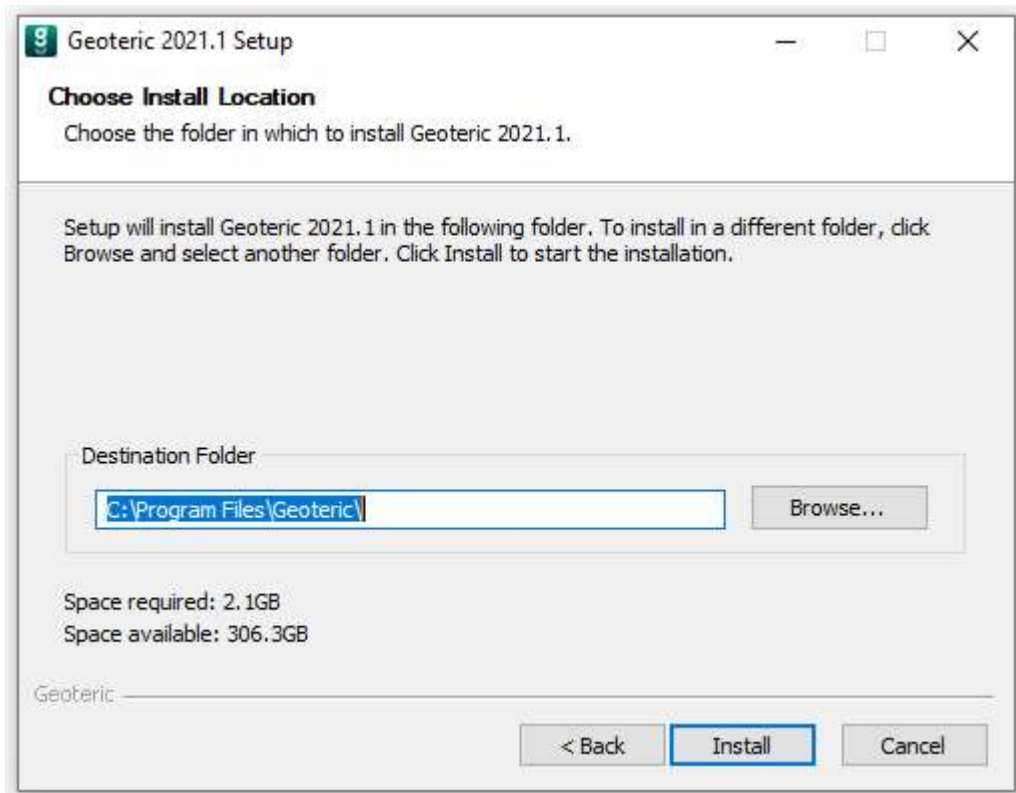

Note that administrator privileges will be needed to install Geoteric.

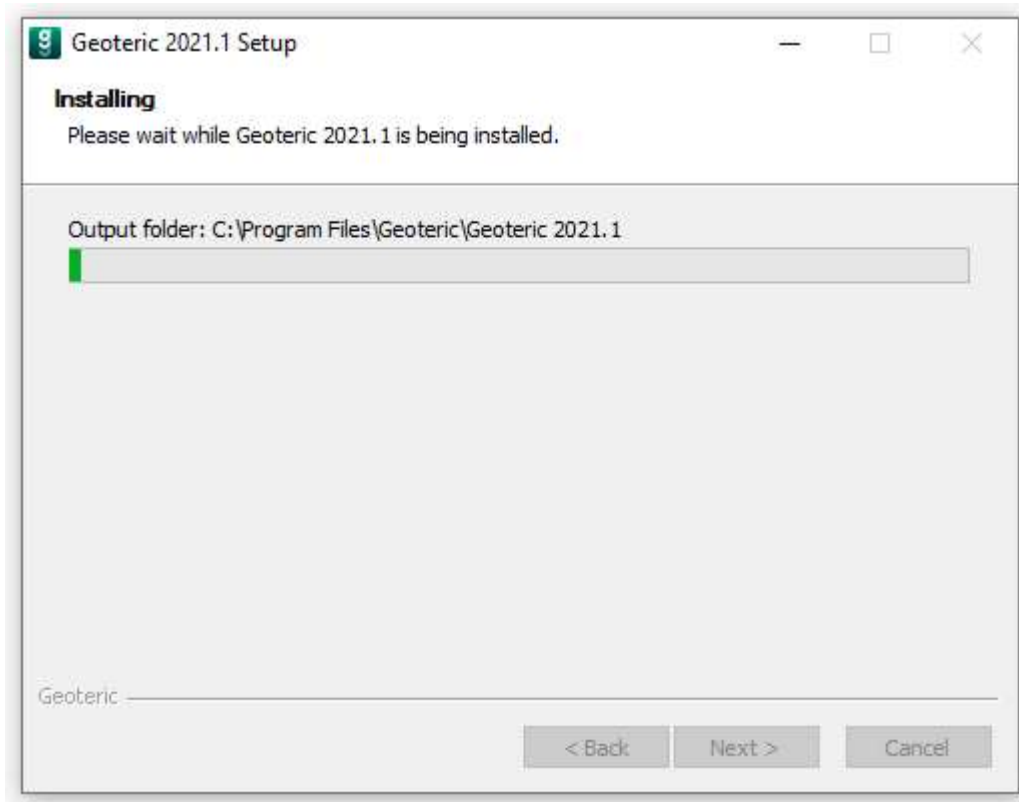

Click "Next>" for the License Agreement.

Click "I Agree" to agree to the license terms.

Click “Install” to install Geoteric to the default location or you can choose to install it in a different location by pressing “Browse...” and selecting a new location.

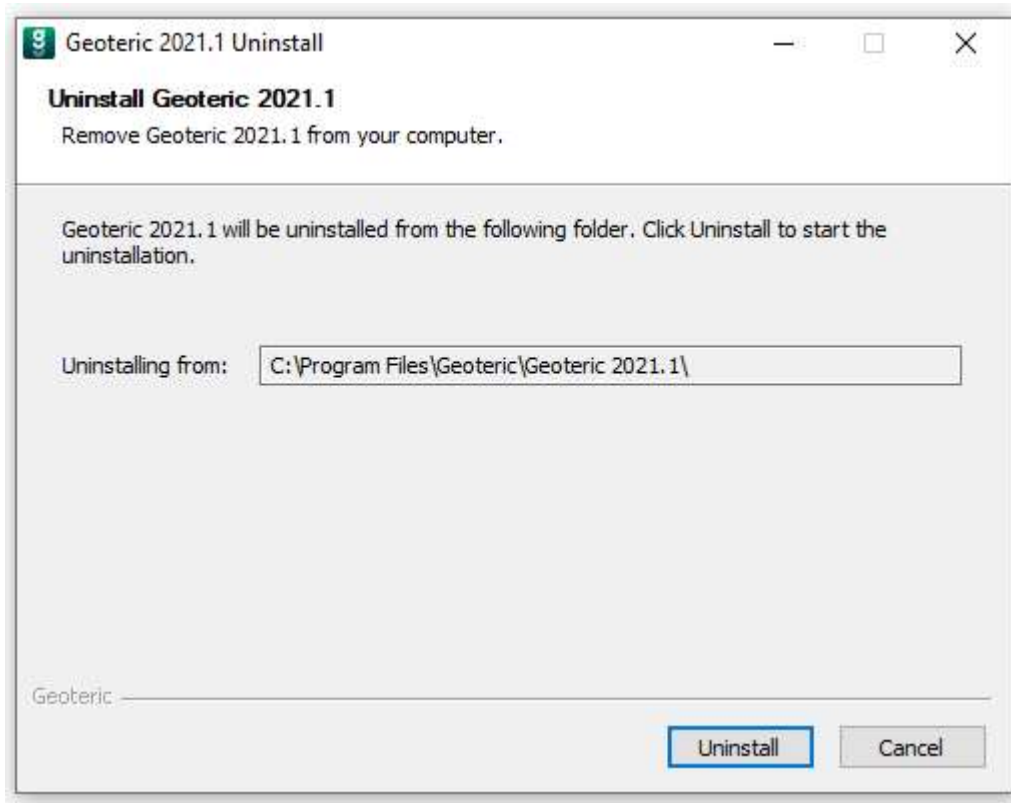

You will see the progress of the installation as files are copied.

Click “Finish” to complete the installation.

Uninstall

To uninstall Geoteric 2021, go into the Control Panel > Programs and Features and find “Geoteric 2021.1”, select and then uninstall it from the program list.

Select the correct location where Geoteric was installed, and then select "Uninstall". Following the progress bar which shows the progress of the uninstall operation, Geoteric will be uninstalled.
